CatDV
SQUARE BOX SYSTEMS

CatDV and Adobe® Creative Cloud®

Efficient production workflows are critical where the increasing demand for high quality footage and tight deadlines mean time is precious.

As a leading Media Asset Management solution, one of CatDV's strengths has always been its integration with the major creative tools: saving time, money and stress in the production process.

CatDV's Adobe panels provide direct access to CatDV's power directly from the Adobe Creative Cloud Products: Premiere Pro, After Effects, Illustrator and Photoshop.

From within the CatDV desktop clients users can 'push' content into Adobe Premiere Pro. The CatDV panel within Premiere can also perform sophisticated searches, browse media, edit metadata, and pull sequences, clips, sub-clips, markers and metadata into the currently open project. Media can be previewed, at high speed, in the frame accurate player, and the panel offers keyboard support for fast auditioning of content.

Key Features

- Supports master clips, sequences, sub-clips, markers and metadata
- Full access control and security
- Search by field
- Simple textual searches
- A sophisticated query builder with Boolean logic
- Rapid refinement of search results to find the right shot
- Access to CatDV Smart Folders / Shared Saved Queries
- Browse CatDV catalogs
- Browse CatDV metadata
- Preview footage
- CatDV Metadata can be updated inside the Premiere panel

After Effects, Photoshop and Illustrator

Finding the right shots has never been easier or faster across the Adobe creative suite. The CatDV panel for Adobe now offers similar capabilities in other Adobe creative tools.

A license for the panel can be installed on any work station with CatDV desktop (CatDV Pro, Enterprise or Pegasus) license and additional licenses can also be purchased.
